Slate for your interior  
Raw look with lots of structure

**HH LUX**

Handcrafted Danish Design

# Inspiration for your next interior project

Translucent slate with light. Inside and outside.

The Slate is an innovative real stone veneer consisting of an ultra-thin natural stone layer and a carrier reinforced with fiberglass or cotton.

We offer more than 70 different decors with unique colors and patterns in our stone veneer range. We offer not only slate, but also limestones, sandstones and even marble for your individual project.

A sheet of Slate produces approx. 95% less CO<sup>2</sup> than a conventional thick stone slab during transport. The slate sheet is not only had small weight but is also thin - approx. 0,2-1,8 mm.

From the stone material of a single conventional stone slab of 2 cm, we get 200-400 Slate sheets slabs, depending on the decor.

The emission rates on the transport are therefore many times lower with the slate we use for our lamps and interior decoration than with conventional stone slabs, which leads to a significantly more positive ecological balance.

# Real stone, thin & flexible Slate for wall and facade.

A part of Slate Lite and sales for the Scandinavian market

**SLATE LITE**  
the future of stone.
